ABSTRACT

In response to Department of Defense queries regarding the effectiveness of graduate education for Navy officers at the Naval Postgraduate School (NPS), the Dean of Instruction found it necessary to provide a system for tracking Navy graduates. The data for this system was initially acquired from the Navy officer personnel data files and a subset was selected by matching with the current NPS Navy student population. Design and development of the system includes the Navy Officer Master File (OMF) records, Unit Identification Code (UIC) index file, and Billet Sequence Code (BSC) index file. The prototype for the OMF is complete and operational for the personnel Officer Master File Extract (OMFX) personnel data base maintenance and reporting.

I. INTRODUCTION

There have been various studies contrasting Navy officer graduate degrees and subsequent assignments. In order to determine the cost effectiveness of providing Naval officers with advanced degrees, there is a need to provide a tool for tracking their career paths after graduation from government sponsored graduate education (or Naval Postgraduate School). This menu-driven prototype application was developed to fulfill that requirement. By providing a data base that is easily maintainable and readily accessible for updating billet information, trends in the utilization of officers having government sponsored graduate degrees can be easily viewed through the reporting feature.

A. REVIEW OF CURRENT PROCESS

In the face of downsizing U.S. military forces, the importance of personnel utilization becomes more critical. The current method for reassignment is determined mainly between the detailer and the officer. Moreover, the Navy officer is in a unique position in that the officer generally is required to follow shore duty (Naval Postgraduate School) with sea duty. The officer is interested in checking off the requirements that the promotion board will be reviewing and not concerned with fulfilling a payback tour or pay back

billet. The detailer has limited payback billets opened concurrently with the rotation cycle of the NPS graduates and is concerned with filling positions rather then payback requirements. There are specific guidelines for filling degree-related billets but no current method for applying these guidelines. Moreover, the activity for educating Navy officers and the activity for assigning them are two distinct commands. At best, a system for tracking NPS Navy officer graduates will provide the necessary data to analyze current billet assignments.

B. PURPOSE

Initially, three questions were to be addressed in this study:

- 1. What cost effectiveness can be realized by the Navy in providing advanced degrees to their Navy officers?
- 2. What measures are currently employed in placing graduate Navy officers in applicable billets?
- 3. What career trends are reflective of the Navy officer following graduation at NPS?

There have been several papers written regarding cost effectiveness of advanced degrees for Navy officers which tend to indicate the subjectivity required to make such an assessment. For further review, see references 2 and 3. As stated previously, there is no unified process for placing graduate students. Basically what is available and what is

optimal in terms of career advancement are the two influencing factors. This would require a process change which is not within the scope of this paper (instead of shore to sea; institute NPS (shore) to payback (shore) to sea). Thus, this paper focused on the tracking of NPS Navy officers. This prototype addresses the third question: where do the graduates go? By looking at past trends and developing a system to track current NPS graduates, future assignments may be more efficiently managed.

II. PROJECT REVIEW

There is no formal system analysis and design methodology when developing a system using a fourth generation language (FOCUS). FOCUS is basically a data base maintenance tool and report generator. Three phases are required to develop a prototype. They consist of (1) the requirements review, (2) data base design, and(3) identifying report requirements. Through an iterative process, the system is developed, analyzed and modified until requirements have been satisfied (the requirements may be modified as the process continues and actual application is realized).

A. REQUIREMENTS REVIEW

The hardware and software selection was based on the size of the data and availability to end-users. The NPS mainframe computer (AMDAHL 6225) was selected and CMS accounts set up to utilize existing FOCUS software. The initial data file of Navy records and data elements requires approximately 40 cylinders of storage. Therefore, a subset of the Officer Navy Master File was used. Only current NPS Navy students were selected for this prototype and may be expanded to include all Navy officers as well as other services as the need requires and space allows.

The Officer Master File (OMF) maintained by the Defense Manpower Data Center (DMDC) was identified as the initial data source. These files provided service member data, billet data, and educational data. However, the billet sequence code required to identify payback billets was not available. Further investigation led to a request by the Dean of Instruction to Bureau of Personnel (PERS 5G) to change the Department of Defense Instruction (DODI) to include this service specific data to the DMDC OMF. This information was not received in adequate time to develope this prototype. Alternatively, menu screens were provided to input a sample of officer billet data into the base OMF extract. Ten officers having graduated the last two quarters across the 12 curriculums were requested for entry into the database.

A UIC file from DMDC was identified and initially requested. However, the idea of grouping UICs (like grouping zip codes) to identify "where are the graduates going" was determined to be too broad to be useful in this analysis.

The billet information was determined to be classified by Bureau of Personnel (BUPERS) and therefore not included in this thesis. A billet matrix, used for assigning personnel, was provided for informational purposes only and not within the scope of developing the personnel data base.

Ability to develop user reports through a user friendly application was requested. A simple menu driven application is provided by FOCUS called TABLETALK. This application was

provided as an option from the main menu. A listing of the individual records in the data base and a summary report were provided as options.

B. DATA BASE DESIGN

As stated previously, the OMF prototype was developed for the personnel data base (OMFX). Index keys were included for later linking to the UIC file and the Billet file. These three structures and their elements are summarized in Appendix A.

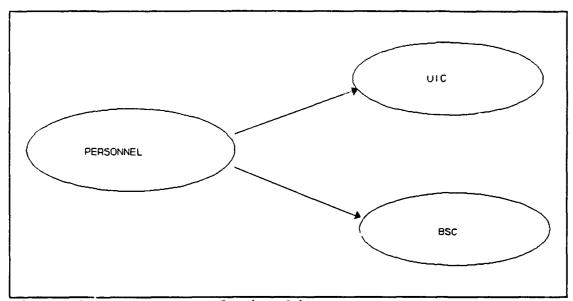

Figure 1 Data Base Relationship

1. Personnel Data Base

The Personnel Data Base referred to as the Officer Master file extract (OMFX) consists of four major components: (1) the service segment; (2) the individual member segment; (3) the billet information segment; and (4) the educational The service component identifies the individual service or organization: NV - Navy, AR - Army, AF - Air Force, CG - Coast Guard, MR - Marines, CIV - Civilian. Navy is the main focus for this study. The next segment, member information, contains the individual's social security number, abbreviated name, and name as indexes, as well as additional personnel data identified in the master file description. The billet segment indexes the current unit identification code (UIC), the billet sequence code (BSC), and the next tour of duty UIC and BSC. This segment provides data information for the next two tours of duty since there is a requirement to complete a pay back tour within this time period. The educational segment contains the officer's last two college degree programs and their respective information. This was restricted by the initial data uploaded from the OMF file. In order to accommodate multiple instances educational data, a unique identifier would need to be determined. In reviewing the actual data, a unique identifier could not be determined. Officers may attend the same college and graduate in two separate majors as well as graduate the same time from two different schools. Although this is the

exception and not the rule, there would be lost data or incomplete data on these students if the index were school or date of completion.

2. Unit Identification Code (UIC) File

The UIC file would be used to store data from the UIC file from DMDC providing address information only. This would be helpful if grouping them by geographical area was determined to be useful for tacking NPS Navy students.

3. Billet Sequence Code File

The BSC would identify specific billet codes associated with a UIC. The file would provide subspecialty codes associated with each unique UIC/BSC in order to identify and link potential billets by subspecialties granted at NPS.

III. PROJECT DESIGN AND IMPLEMENTATION

A. OFFICER MASTER FILE EXTRACT (OMFX) MODEL

The OMFX model was designed as a tool to provide on-line access for end-user reporting. This information was normalized into three separate relational data bases. The personnel data base was designed to expand its usage to include all Navy Officers and all services. An account was developed to provide simultaneous access, updating and reporting, referred to as a SINK machine (synchronized usage). Multi-usage was implemented for entering test billet data from each of the NPS curriculum offices. It appears feasible to implement the total Navy force on a single CMS account SINK machine. The Navy OMF fixed file required 40 cylinders of storage. A program account of approximately 50 cylinders and a users account of 4 cylinders for each end user would be The model currently consists of 10 cylinders of required. data and programs and one 4 cylinder user account on the Naval Postgraduate School (NPS) mainframe computer.

B. PROGRAM DEVELOPMENT

Programs developed in FOCUS consists of a main menu for uploading data, maintaining the data base, and reporting. Since this was a prototype, backup procedures and backup programs were not included. However, security passwords were

implemented due to the sensitivity of the data. To view the system, refer to the Users Guide at Appendix C. The accounts currently set up for this model are temporary accounts.

IV. CONCLUSIONS

The initial requirements of providing a tool to track NPS Navy students was realized in the OMFX model. The adding of billet information on students graduating from NPS provides the information required for tracking but raises the issues of entering and maintaining the data as well as keeping duplicate information at their respective command levels. At best, trends can be reviewed from data gathered at DMDC providing that the billet sequence codes can be included in their OMF. The timeliness of the data represents a significiant problem worthy of further study. The OMF is a fiscal year file. Requirements to have the data quarterly (to include BSC information) impact the submitting agency and the supporting agency.

When it is determined how the BSC data is to be included (provided through the OMF file or through inputing by department curricular offices) and how the data is to be maintained current, the basic concept presented to track these personnel is feasible. The OMFX model represents a successful implementation of a data base with multi-user access.

H. TABLE 8: PROGRAM FILES

PROGRAM NAME STARTSU EXEC STARTFOC EXEC PROFILE FOCEXEC	DESCRIPTION Disconnects the Account for SINK setup. Links user to FOCUS environment. Indentifies data base file and executes main menu.
OMFAD10P FOCEXEC OMFAD11P FOCEXEC OMFDA000 FOCEXEC OMFDA10P FOCEXEC OMFDA11P FOCEXEC OMFDA12P FOCEXEC OMFDA15P FOCEXEC OMFDA10R FOCEXEC OMFDA20R FOCEXEC USEOMF FOCEXEC	Creates OMFX FOCUS from OMF FIX. Matches with NPS Student Data Base. OMF System Main Menu. Add module. Modify module. Delete module. Add/Modify UIC and BSC transfer. Listing of officers from OMFX. Summary of subspecialties from OMFX. Sets password and identifies FOCUS file.

APPENDIX C: USERS GUIDE

A. INTRODUCTION

- 1. This prototype was developed in response to questions posed by Dean Elster regarding status of NPS Navy students after graduation. The instructions will address using the system to update personnel information. The OMF system resides on the NPS Computer Center mainframe.
- 2. The user needs basic knowledge of a CMS user account and basic knowledge of FOCUS (for TABLETALK). Passwords for logging on to the account can be provided by the Dean of Instruction.

B. LOGGING ON

- 1. There are two CMS accounts for the OMF system: the data base account and the user account. The data base account must be initiated as a SINK machine in order to provide simultaneous updating of the OMF records.
- 2. Starting the SINK Machine: The OMF resides on account 5010P. Log on to this account and execute the command STARTSU. This will make the account active as a SINK machine and will log you off automatically.
- 3. Logging On as a User: For this prototype, user account 5011P is provided. To initiate a session, type STARTFOC. This will put the user in the FOCUS environment and

initiate his PROFILE FOCEXEC to provide the main menu sessions.

C. SYSTEM MENUS

1. A logo will appear on the screen, 'OMF', press ENTER to continue. The main menu provides the user with maintaining and reporting from the OMF data base.

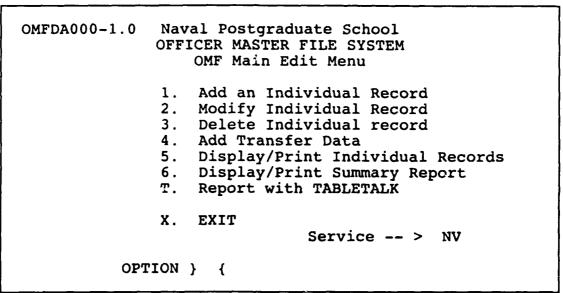

Figure 1 OMF Main Edit Menu

2. To add or modify an existing record the menus are the same, the actions are different (include / update).

```

Figure 4 Add/Modify UIC/BSC Data

OMFDA10P-1.4 Officer Master File System Add Screen 4

Please input current graduate data: COLLEGE NAME: Year Completed:

Level: Major: Specialty:

Please input previous college data: COLLEGE NAME: Year Completed:

Level: Major: Specialty:

Figure 5 Add/Modify Education

3. To delete a record from the OMF, the following screen requires entering the Navy officer's social security number.

OMFDA12P-1.1 Naval Postgraduate School Officer Master File System Delete Screen

Delete an Officer Master record by entering the following data:

SSN

DDM

Figure 6 OMF Delete Menu

Messages appear on the bottom of the screen indicating actions taken: Record <SSN> deleted; Record <Name> Added/Modified.

D. REPORTS

1. Two reports are provided for selection on the main menu as Options 5 and 6. The individual and summary report

samples are provided at Appendix B. The TABLETALK report writer is window driven and provides the user an easy tool for producing other reports as required. Knowledge of the FOCUS environment is helpful. The PF3 is a quit key and the TAB is used to go from line to line. Hitting ENTER allows you to see the next menu.

E. LOGGING OFF

- To end the session on the users account, enter X to exit. To log off the CMS account, enter LOG.
- 2. Be sure to bring down the SINK when you are finished: Log on to account 5010P and type STOP and press ENTER, then LOG off the account.
